Re: Scott Seiter

Dear Dr. Green:

I was very happy to see this 8-month-old boy February 16, 1973 with significant calcaneal valgus and external rotation of his legs, the right worse than the left. He was placed in a brace to maintain the feet and legs in internal rotation. He will have this off for a half-hour in the morning and a half-hour in the evening and I believe that if we persist for a period of time he will have a very good result.

Very sincerely,

Boyd
